

Empathy Map

Date	15 March 2024
Team ID	
Project Name	EcoTrack - AI-Powered Carbon Footprint Tracker
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "I want to live sustainably, but I don't know where my carbon footprint is actually coming from." • "There are too many generic eco-tips online that don't apply to my routine." • "I wish there was one place to track my travel, food, and energy habits together."	THINKS • Is my daily commute really that harmful compared to my diet or electricity use? • I'm not sure if small changes I make actually add up to a real difference. • It would help to see real numbers instead of vague sustainability advice.
PERSONA Eco-Conscious User (Working Professional / Student - End User)	
DOES • Occasionally checks online carbon calculators but rarely returns to them. • Tries to carpool or reduce meat consumption inconsistently, without tracking progress. • Searches for eco-friendly lifestyle tips on social media and forgets them quickly.	FEELS • Motivated to help the environment but overwhelmed by where to start. • Guilty when daily habits (travel, food waste) feel unsustainable. • Encouraged and proud when they see visible progress toward a goal.
