| <b>Date</b>          | 15 March 2024                                                                                           |
| <b>Team ID</b>       | B Siva Krishna Santhosh<br>Gowthami Botsa<br>Jaya Sarvani Vengalasetty<br>Pilipe Praveen<br>Vaishnavi P |
| <b>Project Name</b>  | EcoTrack - AI-Powered Carbon Footprint Tracker                                                          |
| <b>Maximum Marks</b> | 1 Mark                                                                                                  |

### Team Involvement in Demonstration:

This document records the active participation and roles of each team member during the EcoTrack project demonstration. It ensures that every member contributes meaningfully to the presentation and that responsibilities are distributed fairly and clearly.

| S.No | Team Member Name          | Role in Demo                            | Section Presented                                               | Contribution Summary                                                                                                                                      | Participation (Active / Passive) |
|------|---------------------------|-----------------------------------------|-----------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
| 1    | Pilipe Praveen            | Backend & AI Integration Lead           | Solution Overview & Live Demo: AI Suggestions and Report Export | Built the Flask backend and integrated the Groq AI suggestion engine and Carbon Interface API; contributed the most to core backend and AI functionality. | Active                           |
| 2    | Jaya Sarvani Vengalasetty | Frontend & Feature Integration Lead     | Live Demo: Habit Logging, Carbon Gauge & Dashboard              | Built the habit logger, animated carbon gauge, and dashboard UI; also led documentation and feature integration across the app.                           | Active                           |
| 3    | Vaishnavi P               | Team Lead / Coordinator                 | Introduction & Problem Statement                                | Coordinated the team, managed the project timeline, oversaw architecture decisions, and led the overall demo flow.                                        | Active                           |
| 4    | B Siva Krishna Santhosh   | Backend Developer                       | Live Demo: Emission Calculator & Authentication                 | Implemented the carbon emission calculation logic and Firebase Authentication flow.                                                                       | Active                           |
| 5    | Gowthami Botsa            | Frontend Developer (Data Visualisation) | Live Demo: Trend Dashboard & Charts                             | Built the Chart.js trend visualisations, 14-day category breakdown, and heatmap calendar.                                                                 | Active                           |

### Team Coordination Notes:

| Aspect                                        | Details     |
|-----------------------------------------------|-------------|
| <b>Team Leader / Coordinator</b>              | Vaishnavi P |
| <b>Overall Team Coordination Rating (1-5)</b> | 4           |

|                                 |                                                                                                                                            |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Any issues during demo</b>   | Minor delay in AI suggestion response during the live demo due to Groq API latency.                                                        |
| <b>How issues were resolved</b> | Kept a pre-tested sample response ready as a fallback talking point while the live API call completed, so the demo flow was not disrupted. |
